### DETAILED ACTION

The indication of allowability set forth in the previous action is withdrawn and prosecution is reopened in view of the following new ground of rejection.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yusuke et al JP 2004-045304 in view of Makoto et al JP 2000-105111.**

Yusuke discloses in figures 1-28 a light source emitting modulated light, a light detecting element, the sensor control stage, an image construction stage which calculates a distance value based on the charge picked up on the sensor control stage. It is well known to improve a S/N ratio by using integration or mean value on values measured twice or more. Accordingly, it would have been obvious for those skilled in the art to apply such conventional art to Yusuke so as to obtain a range (distance) by using integration or mean value on electric charges detected twice or more. Makoto describes improving a S/N ratio by selecting a maximum integration period in an unsaturated range from photoelectric conversion signals having different integration periods. It would have been obvious for those skilled in the art to apply the teaching described in Makoto to Yusuke so as to obtain a range (distance) by using an electric

charge in a maximum detection period in an unsaturated range from electric charges detected twice or more in different length detection periods. The combination of Yusuke and Makoto teaches all the limitations of claims 2-15 (see US Pat. No. 7,138,646 for English translation of the Yusuke document, and the full translation of the Makoto reference provided with this office action).
